Step-by-Step Guide to Install and Configure Maven on macOS

1. Install Maven

- **Using Homebrew**:

```
brew install maven
```

2. Verify Installation

```
mvn —version
```

3. Configure Maven

- **Set Environment Variables**:

  - Open the `.zshrc` file:

    ```
    nano ~/.zshrc
    ```

  - Add the following lines to set the M2_HOME and MAVEN_HOME environment variables:

    ```
    export M2_HOME=/usr/local/Cellar/maven/<version>/libexec
    export MAVEN_HOME=/usr/local/Cellar/maven/<version>/libexec
    export PATH=$PATH:$M2_HOME/bin
    ```

  - Replace `<version>` with the installed Maven version.
  - Save and close the file.

- **Apply the Changes**:

  ```
  source ~/.zshrc
  ```
